

Innovation: buffer storage especially for small local district heating networks.

Decentral buffer storage systems from ENERPIPE for a more efficient heat use.

Locally buffer storage systems of ENERPIPE minimize heat losses in district heating networks.

The decentralized solution of ENERPIPE offers lots of benefits:

- > Efficient heat use
- > Less heat losses
- > Smaller pipe diameter in the district heating network
- > Smaller volume in the central buffer storage (buffer volume is moved from central heating into property)
- > The installed load can be reduced by 25 % due to buffer storage systems
- > Controlled loading of the buffer optional available
